Pit Crew Cooling System

Shafer Enterprises LLC of Stockbridge, GA has introduced a new line of portable COOL SHIRT™ Cooling Systems for *racing pit crews*. The PIT CREW Systems utilize ice and water circulating through lightweight cotton shirts to cool up to 6 crew members simultaneously, while they also have smaller systems that can accommodate 1-2 crew members and spotters at a time. They come standard with individual temperature controls and also have optional fire-retardant shirts from SPARCO, Carbonex and Stand21 available. The COOL SHIRT™ Systems operate on 12V or 110V systems and are completely portable. The systems have been independently-tested and proven to be extremely effective for maintaining a safe core body temperature for the crew, greatly reducing heat stress and fatigue. For more details call (800)345-3176 or visit them on the web at www.coolshirt.net
